

# Technical Academy SAP Integration Suite (18320)

## Business Challenges

Integration is becoming the number-one strategic priority for organizations on their journey to an intelligent enterprise. SAP Integration Suite allows to keep up with the pace and complexity of hybrid and multi-cloud architectures: more simplicity, reliability and agility is needed for a seamless communication without comprising existing systems and processes. Fulfilling those needs requires integration modernization in various dimensions such as the integration tools itself but also new architectural approaches.

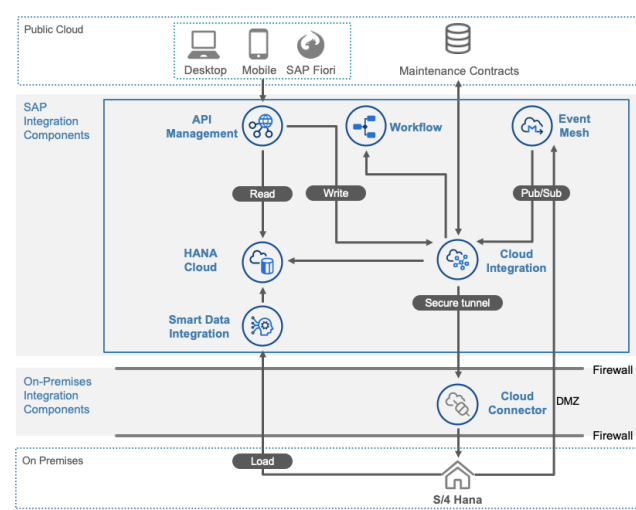

## How does SAP Cloud Solution help?

By introducing an SAP-based decoupling layer that provides appropriate data in a high-throughput and modern fashion (APIs), companies can both reduce the workload on the underlying systems and increase agility and scalability of their IT. This digital integration hub is based primarily on the SAP HANA Cloud and on the SAP Integration Suite services provided by the SAP Business Technology Platform (BTP)

## Workshop Introduction

The purpose of the workshop is to get familiar with the SAP Integration Suite by implementing a Digital Integration Hub blueprint based on the SAP BTP to address a real business challenge. Through exercises based on the Integration Solution Advisor Methodology (ISAM) of SAP, you will experience both the simplicity and the power of SAP Integration Suite, and you will model, adapt and manage APIs, perform application, data and process integration. The entire workshop should take 6-8 hours to finish.

## Solution Map

## What are the Benefits?

- **Get an architectural overview of SAP BTP**
- **Build and implement a Digital Integration Hub**
- **Get to know and work with the main tools and components of the SAP Integration Suite**

## Workshop Facts

- **Complexity:** Intermediate / Complex
- **Audience:** Business Analysts, Developers, Technical Architects, Cloud Administrators
- **Duration:** Approximately 2x 3-4 Hours
- **Prerequisites:** Knowledge of web protocols, integration topics, Rest API Tools (Postman)
